

Module – Hosting A Static Website

1. Install Apache or Nginx on your Linux server and verify the installation by accessing the default web page via your browser.

ANS :

Step 1:

- Install Apache:
 - `sudo apt update`
`sudo apt install apache2 -y`

Step 2:

- Start the service:
 - `sudo systemctl start apache2`
`sudo systemctl enable apache2`

Step 3 :

- Verify status:
 - `sudo systemctl status apache2`

Step 4 :

- Open your browser and visit:
 - `http://localhost`
 - You should see the **Apache2 Ubuntu Default Page**.

2. Create a folder named myflipkart in your web server's root directory and place an index.html file inside it that displays 'Welcome to MyFlipkart Deals!'.

ANS :

1) Create the directory:

- `sudo mkdir /var/www/myflipkart`

2) Create the HTML file:

- `sudo nano /var/www/myflipkart/index.html`

3) upload a HTML file

4) save & exit

3. Update your web server configuration so that visiting `http://localhost/myflipkart` shows your custom `index.html` page instead of the default server page.

Hint: For Apache, use the Alias directive; for Nginx, use a new location block.

ANS :

- 1) Open Apache configuration:

- `sudo nano /etc/apache2/sites-available/000-default.conf`

- 2) upload a HTML code

- 3) Save the file.

- 4) Restart Apache:

- `sudo systemctl restart apache2`

- 5) Test in browser:

- `http://localhost/myflipkart`

- 6) Output:

- Welcome to MyFlipkart Deals!

4. Add a favicon to your static site by placing a `favicon.ico` file in the correct location and updating your HTML to reference it.

Constraint: Use any small image and rename it to `favicon.ico` for this exercise.

ANS :

- 1) Copy any small image and rename it:

- `favicon.ico`

- 2) Place it in:

- `/var/www/myflipkart/`

- 3) Verify:

- `ls /var/www/myflipkart`

- 4) Example output:

- `index.html`
`favicon.ico`

- 5) Upload a HTML Code

- 6) Expected output:

- Syntax OK

- 7) Check website:

- `http://localhost/myflipkart`
